

Acorn Systems

Acorn Universal Connector™

Data Import Utility

Product Overview:

Acorn Universal Connector (AUC) allows users to import data from various disparate sources into system generated staging tables reflecting your Acorn EPS Model. Predefined and structured staging tables are automatically generated from the Acorn's EPS Application upon model completion. General ledger, department drivers, and cost object instances are automatically loaded upon model execution. AUC monitors ongoing changes to the Acorn model and subsequently updates all staging tables' schemas to ensure consistent table design. AUC also includes over 16 best practice validation scripts and is easily customer defined. Validation script examples include but are not limited to null values, general ledger facility location checks, general ledger account types, duplicate department driver names, and cost object structure relationships.

Technical Specifications and Application Features

Technical Specifications:

- Load tool utilizing Microsoft SQL technology
- Microsoft SQL Server 2005 Certified and Microsoft
- SQL Server 2008 and 2008 R2 compatible
- 32-bit and 64-bit server installation compatible
