

Acorn Systems

Model Change Management™

Model Updating Utility

Product Overview:

Acorn's Model Change Management (MCM) facilitates the process of making small- or large-scale changes to your model through an external interface. MCM is often used by Acorn customers to manage multiple environments in an efficient manner and propagate changes without manually replicating data and model entry through the standard application interface.

Configure MCM to reference different models on the same or different environments to review additions, modifications and deletions between two Performance Analyzer™ or Cost Analyzer™ models, and select the changes to promote from the source to target model. MCM easily and effectively manages the continuity between any two environments, and is perfect for development, testing, and production tiered deployments.

Technical Specifications and Application Features

Technical Specifications:

- Client installation from your Acorn deployment site
- Integrates into EPS 4.5 and later

For More Information Contact Acorn Systems:

- Visit: www.acornsys.com
- Email: sales@acornsys.com
- Call: 800.982.2676

Application Features:

- Compare changes between two models on the same or different environments
- Select changes to merge into your target model
- Review change sets off-line for validation and process control
- Save change files to be deployed at a later time
- Fully manageable via a Command Line Interface for batch scheduling
