

Acorn Universal Connector

Acorn Universal Connector™ (AUC) allows users to import data from various disparate sources into system-generated staging tables reflecting your Acorn EPS model. Predefined and structured staging tables are automatically generated from the Acorn EPS application upon model completion. General ledger, department drivers, and cost object instances are automatically loaded upon model execution.

Technical Specifications & Application Features

Technical Specifications:

- Load tool utilizing Microsoft SQL technology
- Microsoft SQL Server 2005 Certified and Microsoft SQL Server 2008 compatible
- 32-bit and 64-bit server installation compatible

Application Features:

- AUC monitors ongoing changes to the Acorn EPS model and subsequently updates all staging tables' schemas to ensure consistent table design
- Includes over 16 best practice validation scripts and is easily customer defined

Examples:

- Null values
- General ledger facilities
- General ledger types
- Duplicate department driver names
- Cost object table relationships
